

Case Study

Denewood Road, Highgate, London

Client: Private

Project type: Staircase

Details of the Design:

Identical semi-elliptical staircases for a newly built property.

Who is the user?

Private Home

Constraints / challenges?

This project required complete accuracy as the identical semi-elliptical staircases formed the centre of this showstopping home.

The homeowners invested heavily in their new home and wanted absolute perfection – something our in-house Installation Team delivered with ease.

Fabrication detail:

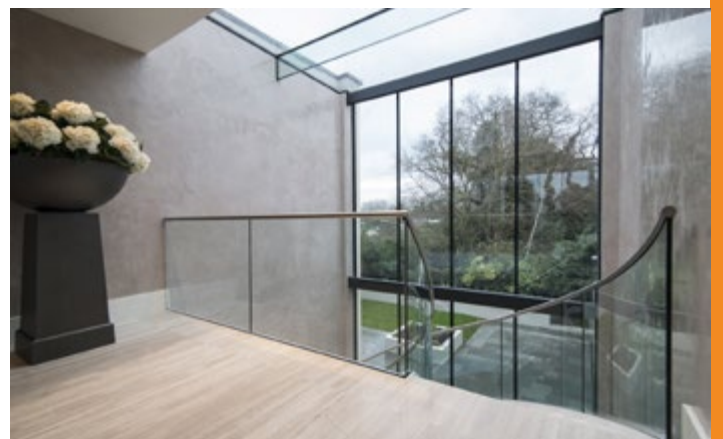

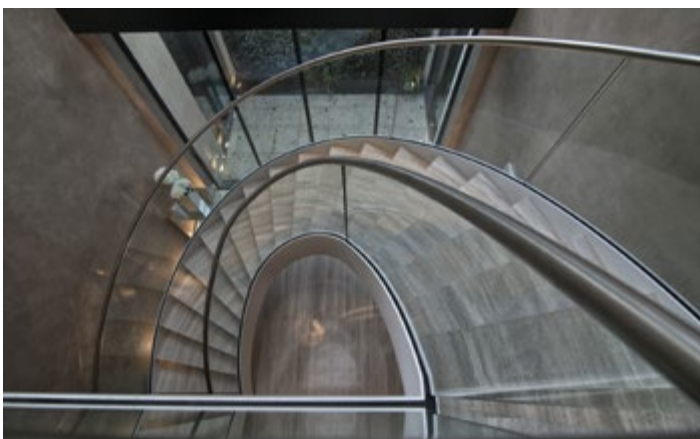

Our Team surveyed the site with our 3D scanner to ensure complete accuracy. The slim, mild steel stringers and treads were designed to facilitate huge curved toughened glass balustrades. We also designed, manufactured and installed the complementary stainless-steel handrails and riser-less stone treads.

Installation detail:

Our in-house Installation Team carried out a site survey at the very start of the project. This ensured that all designs and manufacturing was 100% accurate. The installation took just a few days with our advanced Team attending from start to finish.

Why was the Elite Metal Group chosen for this project?

Since 1951 we've been creating bespoke staircases to suit the diverse needs of our customers. Our attention to detail and our ability to design beautiful staircases that work in harmony with the space available is our forte.

The finished project:

The family in this beautiful London home were absolutely thrilled with their finished staircase. They particularly enjoy how it looks so different throughout the day with a light and airy feel during daylight hours, whilst the metalwork feels more robust during the evening.

This project was a real favourite amongst our Team.
